

Natural Clinician LLC
Clinical Augmented Silver Colloid™

Years of research and development have lead to the Natural Clinician™ **Clinical Augmented Silver Colloid™**. It is unlike any simple silver colloid or silver hydrosol. It is a step beyond them all. Silver Colloids have proven to be very valuable tools in the fight against antibiotic resistant bacteria and fungicidal resistant molds and fungus. Over the last decade, research has shown exactly how much more effective simple silver colloids and hydrosols are against these dangerous pathogens. Natural Clinician™ **Clinical Augmented Silver Colloid™** goes orders of magnitude further in the ability to kill these difficult germs.

The **Clinical Augmented Silver Colloid™** kills germs better than simple Silver colloids and hydrosols. It does this by taking the best silver colloid with the optimum particle size and surface area ratio and then combining it with synergistic enhancers to increase the ability to penetrate the pathogens. We start with the highest possible silver colloid concentrate that is not compounded with proteins. This allows the greatest ratio of particles of silver to bacteria. By not compounding, we allow the full reactive potential of the silver particles to be expressed against the bacterial cell wall. Then we add enhancers that increase the permeability of the bacterial and fungal cell walls. This increases the uptake of the bacteria and consequently the kill ratio by 3 to 1000 times over simple colloids and hydrosols.

The addition of Xylitol as a further antibacterial agent notably exacerbates the bacterial uptake of the silver and the consequent kill ratio. The enhancements to the basic silver colloid are so profound that laboratory tests show orders of magnitude better ability to kill the pathogens than simple colloids or hydrosols alone. Of course the advantage over compounded silvers and mild silver proteins is even more dramatic.

The ultimate demonstration of an antibacterial agent lies not in its shape or size or contours. The ultimate demonstration is how well it kills bacteria, fungus and virus. In this regard, the Natural Clinician™ **Clinical Augmented Silver Colloid™** has demonstrated in laboratory testing its supreme ability to out-kill all of the simple silver products that flood the market today.

In a side-by-side test against E. Coli, Natural Clinician™ **Clinical Augmented Silver Colloid™** killed 10 times more bacteria in a 30 minute exposure than Natural Path/Silver Wings. In a test against Meso Silver, the Natural Clinician Natural Clinician™ **Clinical Augmented Silver Colloid™** killed 1000 times more bacteria. When compared to Argentyn 23™, the Natural Clinician Natural Clinician™ **Clinical Augmented Silver Colloid™** had 1/3 the number of colonies left alive.

When you provide Natural Clinician Natural Clinician™ **Clinical Augmented Silver Colloid™** to your patients, you are not just providing them with the best silver product on the market. You are providing them with the next generation of silver antiseptics technology.
